## 1 MODEL OVERVIEW

### 1.1 DESCRIPTION

- Tank that houses the process that kills microbes/bacteria in milk.
- Stainless Steel

### 1.2 REQUIREMENTS

Requirements for each model are gathered based off of the needs of the customer. Reference images are then found and used to accurately build 3D models. The required components for this model include:

- Dome Lid
- Longer Legs
- Anchor and Propeller Agitators with Umbrella and Slanger Shields
- Fittings for Thermometers
- Outlet Valve
- Sloped Inner Surface with Rounded Corners
- Agitator Motor and Attachment
- Manway
- Airspace and Liquid Thermometers
- Chart Recorder

#### 1.4 MODEL VERSION AND HISTORY

Information about the model version can be found in the “Model\_Version.txt” file located in the model’s directory (same directory the model’s .fbx file is located).

Table 1 Model Revision History

Version	Description	Date
1.0	Final release of the draft Vat_Pasteurizer.fbx	05/15/17

1.5 MODEL SUMMARY

Table 2 Model Summary

Model Name	Vat_Pasteurizer.fbx
Unity Package Name	FDA_Vat_Pasteurizer.unitypackage
Model Units	Meters
Coordinate System	Cartesian X, Y, Z (see Figure 2 below)
Model Origin	Origin is located at center mass. (0, 0, 0) (See figure 2 below)
Model Orientation Runtime	Forward: Positive Y Up: Positive Z
Model Orientation Maya	Forward: Positive Z Up: Positive Y

Figure 7 Vat Pasteurizer Origin on Cartesian X, Y, Z Coordinate System (Unity Render)

This model was imported into Unity 5.5 to verify the model (see Figure 8 below).

Figure 10 Vat Pasteurizer - Side View (Unity)

## 2 UNITY PACKAGE

### 2.1 IMPORTING THE UNITY PACKAGE

1. Download the “FDA\_Vat\_Pasteurizer.unitypackage” file from Google Drive
2. Open the “DSVT Milk Factory” Unity Project in Unity 5
3. In the top menu bar go to “Assets → Import Package → Custom Package...”
4. A window should pop up showing you the contents of the Unity Package being imported
  - a. This Unity Package should look like this:

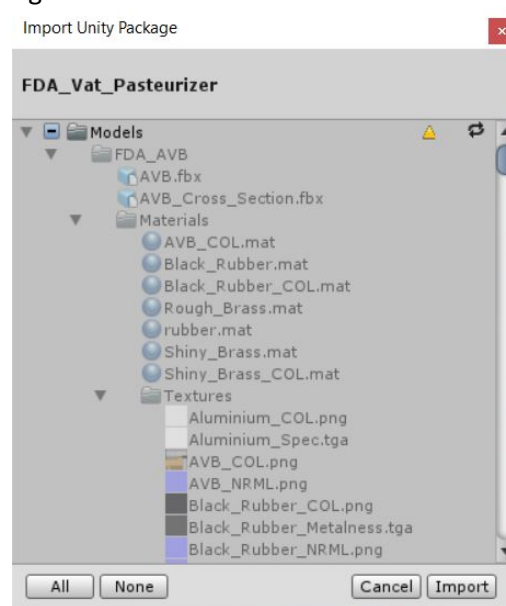

Figure 11 Unity Import Package

5. Press “Import” and the model and materials will be placed into the Assets section.
6. Make sure that when dragging the model into the scene that you select the “Prefab\_\*\*\*.prefab” instead of the FBX as the prefab has the materials stored on it correctly.

### 3 MODEL ATTRIBUTES

#### 3.1 POLYGON ALLOCATION

Polygon allocation is the number of triangles and vertices for a given state and Level of Detail (LODs) in the model. The method for calculating the number of polygons is to gather each model state then count the polygons present in each representation. Animations are not included in the polygon allocation. The Vat Pasteurizer model has a single LOD which is labeled LOD0.

Table 3 Polygon Allocation

Model	# of Triangles	# of Vertices
Vat Pasteurizer	43504	24566

#### 3.2 LEVEL OF DETAIL (LODS)

TBD

#### 3.3 TEXTURE MAPS

For most models in this scene we used tileable textures, most of which comprise of diffuse, normal, metalness, and specular maps. For the materials that use specularity, the spec maps are found in the Alpha Channel of the Metalness maps.

1. Texture Map Formats – JPG, PNG, TGA
2. Texture Map Types – Diffuse, Normal, Metalness, Specularity
3. Average Texture Map Sizes – 2048 x 2048

#### 3.4 SENSOR VIEWS

N/A

#### 3.5 MODEL STATES

N/A

#### 3.6 SKELETAL STRUCTURE

N/A

## 4 ANIMATIONS

N/A

## 5 VERIFICATION APPROACH

### 5.1 RUNTIME SYSTEMS

The 3D model was tested using the following tools:

- Unity 5.5

## 6 LIMITATIONS

N/A
